

LIVESTOCK ACTIVITIES

CREATED BY NATURE, ENHANCED BY PROFESSIONALS

The livestock activities of the agricultural holding began in 2012 with the importation of breeding stock from the USA (North Dakota), Ireland and Russia.

Now 9 farms of the agricultural holding are engaged in cattle breeding. The total number of livestock exceeded 5,000 heads (95% of which is the Angus breed). We supply breeding bulls to the market of Kazakhstan and export to neighboring countries.

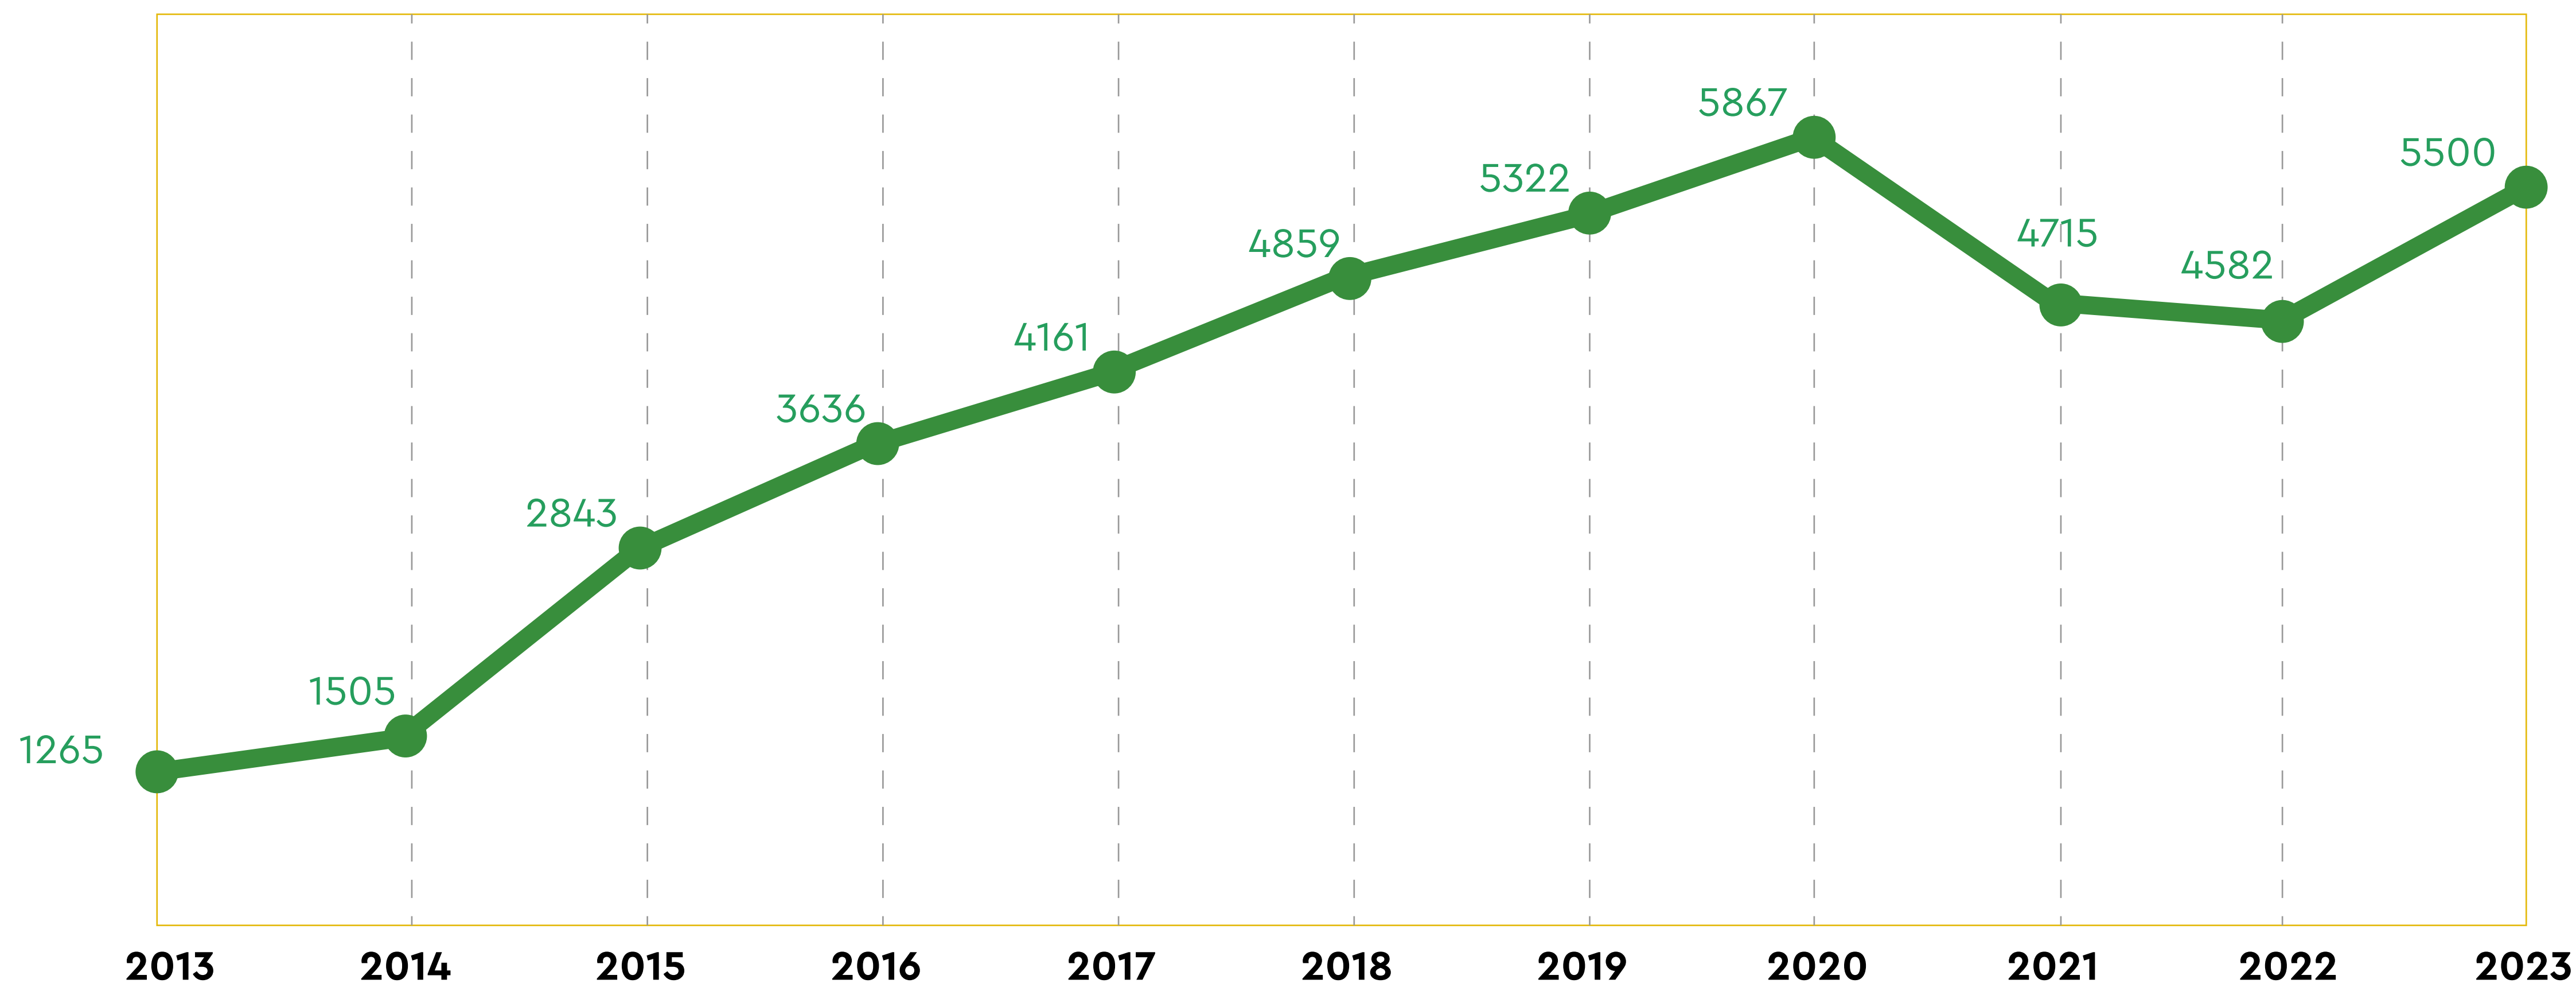

Breeds of cattle available for purchase

Advantages of the Hereford and Aberdeen Angus breeds:

- ▶ fast weight gain
- ▶ light calving
- ▶ high marbling of meat
- ▶ high feed conversion
- ▶ high reproductive qualities
- ▶ possibility of keeping outdoors 365 days a year
- ▶ slaughter carcass yield up to 60%

Nowadays, the number of breeding cattle of the agricultural holding shows a stable growth from 1,000 heads to 5,000

Features of the approach to animal husbandry

Maximize the use of available pasture resources, since it is the cheapest forage

Use of crop waste from straw to grain waste

The cold method of maintenance is an opportunity to reduce capital costs. Animals are kept outdoors all their lives, this allows them to get strong immunity and readiness for the most severe weather conditions.
